

# Small Compass Stand (Chrome Steel)

MU500SC000

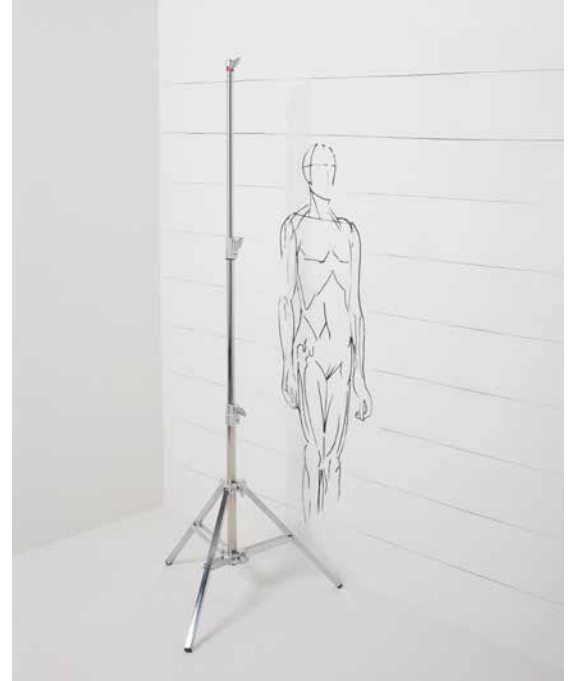

## Description

Our Small Compass Stand is made of steel tube with square section legs, designed for rental companies.

The Small Compass Stand's crosses and sleeves are made of die-cast aluminum. No element is produced in thermoplastic material. The joints between legs and crosses are made with self-locking screws and nuts, instead of rivets, to make maintenance easy.

The clamping joints are equipped with a device that guarantees the locking of the tube with minimal rotation of the knob. The legs of the base are independently adjustable, guaranteeing flexibility in opening the base, and allowing its use even in small spaces, both in the studio and on location.

It is possible to install the wheels for handling, and the pneumatic system (air cushion) to control the descent of the rods under load."
